REMS pressing tongs Mini

Other REMS pressing tongs up to 35 mm each £ **86.⁰⁰**
 e.g. F, G, HR, TH, U, UP, VP

Highly resistant pressing tongs made of forged and specially hardened steel. The pressing contours of the REMS pressing tongs are system-specific and correspond to the pressing contours of the respective press fitting systems. Perfect system-conformant, reliable pressing as a result. Pressing jaws of the pressing tongs with high-precision cut and exactly rounded pressing contour on CNC machining centres. Much lower production tolerances than only cast pressing contour as a result.

Traceability according to EN 1775:2007

REMS pressing tongs/pressing rings with pressing contour M, V, SA, B, HR and UP have worked a specific marking into the pressing contour which leaves a lasting impression on the pressed fitting after the pressing process. This enables the user to check again whether the most suitable pressing tongs or the suitable pressing ring have been used to make the pressfit connection even after the pressing process.

With this traceability REMS fulfils the recommendations of the European standard EN 1775:2007 for the installation of pressfitting systems for gas.
